                                           binding of test molecules to such test sequence; adding a test motobe screened to a test system composed of the DNA-binding protein anothe the duplex DNA test oligonucleotide having the screening and test sequences adjacent one another; incubating the molecule in the test system for a period sufficient to permit binding of the molecule being tested to the test sequence in the duplex DNA; and comparing the amount of binding protein bound to the duplex DNA before and after the adding. The method is useful in screening libraries of synthetic or biological compounds for their ability to bind DNA test sequences. The method may also be used in characterising the preferred binding sequence of any selected DNA-binding molecule. This sequence represents a test sequence corresponding to a promoter target of a human gene.

Nucleic acids encoding useful for treating or immunoregulatory proteins from cats or dogs, preventing e.g. tumors or autoimmune disease disease.

Example 5A; Page 106; 264pp; English

and feline granulocyte macrophage colony-stimulating factor (GMCSF), and nucleotides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, get an entibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including ligand) and fel: The invention relates to canine interleukin-4 (IL-4), canine Flt-3 ligand, canine or feline CD40, canine or feline CD154 (ligand), canine IL-5, canine IL-13, feline interferon-alpha CD40 (IFN-alpha) feline

The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug targetting. Sequences AAZ55491-Z55498, AAZ55513-Z55515 and AAZ55581-Z55608 represent PCR primers used in isolation, amplification and cloning of cDNAs encoding the immunoregulatory proteins of the invention.
                                                       RNA molecule (ribozyme) which cleaves mRNA associated with the development or maintenance of a psoriatic or asthmatic condition. The concn. of the ribozyme necessary to effect a therapeutic treatment is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Interleukin-5; specific; cleavage; target RNA; protein; expression;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RNA was extracted from genital lesions, reverse transcribed to produce CDNA and then the CDNA was used as the template for PCR amplification of various cytokines using the primers in AAT38964 - AAT39005. To confirm the identity of amplified CDNA, digoxigenin-labelled probes specific for each cytokine (see AAT39006-T39021) were hybridised with Southern blots of amplified sequences. The expression profile for regressing warts was established and compared to cytokine expression regressing warts was established and compared to cytokine expression patterns in normal cervical tissue. Results showed that interleukin 12 in patterns in normal cervical tissue. Results showed that interleukin 12 in patterns in normal cervical tissue.
                                                                                                                                                                                                                                                                             barely expressed (if at all) in non-regressing warts, but is expressed in regressing warts. This suggests a central role for II-12 in wart regressing. It has been found that II-12 can be used (especially as a vaccine adjuvant) for treating papilloma virus-associated lesions such as condyloma acuminata (anogenital warts) caused by human papilloma virus type 6 (HPV-6) and/or HPV-11 and more generally for treatment of tumours associated with HPV16 and HPV18 infection e.g. anogenital, cutaneous,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Use of interleukin-12 to treat papilloma virus-associated lesions - eas a vaccine adjuvant with papilloma virus antigen for immuno:therapy warts or tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cytokine; expression profile; genital wart; interleukin 12; IL-12; tumour regression; adjuvant; polymerase chain reaction; PCR; tumour acuminata; human papilloma virus; HPV-6; HPV-11; HPV16; HPV18; anogenital; cutaneous; laryngeal; oesophageal; cancer; 88.

                                                                                                                                                               CC response after T-cell receptor stimulation. Naive T-cells are cells which CC have recently emigrated from the thymus and have a predominantly correctly emigrated from the thymus and have a predominantly correctly engineers can be used in the method of the invention. The comethod of the invention is for evaluating the efficacy of a drug to stimulate the production of naive T-cells. The method comprises obtaining can be used in the method comprises obtaining a sample containing peripheral blood mononuclear cells from a subject. A complete containing the stimulations are then isolated from the sample is conductable dose of a drug is then administered before a second sample is contained. The T-cells in each population is then determined by combained. The T-cells in each population is then determined by contained. The T-cell sunfance proteins. If the number of naive T-cells in the second population is significantly greater than the number cells in the second population is significantly greater than the number of the first, then the drug is identified as being effective. The method can be used to identify naive T-cell count elevating drugs, particularly in immuno-compromised subjects, e.g. HIV positive subjects, cancer patients or individuals with viral infection or autoimmune disease
                                                                                                  Query Match

This sequence and AAT47000 are primers for the interleukin-5 gene. CD8 cells provide cell mediated immunity through both cytotoxic and suppressor mechanisms. The naive subset of CD8 cells expresses the CD45RA surface marker, and make a relatively poor cytokine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PCR; polymerase chain reaction; primer; amplify; beta-actin; IL-2; IL-4; interferon-gamma; interleukin-2; peripheral blood mononuclear cell; IL-5; granulocyte macrophage colony stimulating factor; GM-CSF; cytokine; PBMC; CDB cell; T-cell; cell mediated immunity; cytotoxic; CD5RA; IL-10; HIV; surface marker; naive T-cell; thymus; proliferative response; antibody; cognate antigen; immuno-compromised; cancer; viral infection;

The present sequence is an antisense oligonucleotide HUMIISASS specific for the human IL5. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary disease, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON, its broad the proposition of the subject to the sub
Antisense oligonucleotide; multiple target; antisense treatment; impaired respiration; inflammation; lung disease; pulmonary vasoconstriction; inflammation; allergic rhinitis;

The antisense oligonucleotides may be derived from sequences AAX55272-74. These multiple target oligonucleotides (specifically AAX55180-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, including lung diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis, acute asthma, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukemias, lymphomas, carcinomas e.g. colon cancer, breast cancer, lung cancer, pencreatic cancer, as hepatic cancer, as hepatic metastases, as hepaticcellular carcinoma, kidney cancer, melanoma, hepatic metastases, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          17-SEP-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Synthetic.

Human; adenosine receptor; low adenosine antisense oligonucleotide;

```
The present invention describes a new composition comprising an antisense CC oligonucleotide (ON) with low adenosine (up to 15%), which targets culletic acids involved in bronchoconstriction, allergies, and/or CC inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are CC useful for the treatment of diseases associated with inflammation, CC impaired airways, including lung disease and diseases whose secondary CC effects afflict the lungs of a subject. They can be used for treating CC e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impaired airways, including lung disease on the used for treating CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive conditions, respiratory distress syndrome, pain, cystic conditions, pulmonary vasoconstrictive such as leukaemias, lymphomas, cc arctinomas, and cancers which may metastasise to the lungs, including contents of the present and prostate cancer. The reduction of the adenosine content of the CC release of deoxyademosine which activates adenosine receptors causing concloconstriction and inflammation. AAA32313 to AAA35312 represent the mucleotide sequences given in the sequence listing from the present the cromation, which correspond to SEQ ID NO:1 to 2815, and then the last 185 capuances are also called SEQ ID NO:1 to 185, but the sequences differ C componence of the present invention do not match constituted and corresponding SEQ ID NO: sequences given in the sequences given in th

The present invention describes low adenosine (A) content antisense CC oligonucleotides and compositions (I) comprising them. In the antisense CC oligonucleotides the A is replaced by a 'Universal' or alternative base. (CI) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the CC expression and or activity of target polypeptides associated with CC lung/respiratory disorders and malignancies, such as stimulating and CI cantivating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and CC chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system creeptors, binding proteins and malignancy associated proteins. The CC receptors, defensins, growth factors, vasociative peptides and CC receptors, binding proteins and malignancy associated proteins. The CC including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or CC condition selected from pulmonary vasoconstriction, allergy(ies) and/or astima, impeded respiration, respiratory disease (COPD), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary condition, and composition, emphysema, chronic obstructive pulmonary disease (COPD), composition, and composition and antisense oligonucleotides used in the exemplification of the present human polynucleotide condition and antisense oligonucleotides used in the exemplification of the present human polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       human; airway disorder; bronchoconstriction; lung inflammation; surfactant depletion; respiratory; bronchodilator; antiinflammatory; immunosuppressive; antiasthmatic; analgesic; hypotensive; cytostatic; respiratory obstruction; pulmonary obstruction; impeded respiration; surfactant hypoproduction, pulmonary vasoconstriction, asthma; RDS; respiratory distress syndrome; pain; cystic fibrosis; allergic rhinitis; pulmonary hypertension; emphysema; pulmonary transplantation rejection; chronic obstructive pulmonary disease; pulmonary infection; bronchitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 14; Page 208; 1592pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                            CC junctions of genes encoding a polypeptide associated with lung and/or comparations of genes encoding a polypeptide associated with lung and/or casal airway dysfunction and a second active agent comprising an comparation of the invention can be antiinflammatory, antiallergic, antiasthmatic, hypotensive, and cytostatic activity. The composition of the invention can be antisense gene therapy. The composition is useful for treating or compensation, also or preventing a respiratory, lung or malignant disease or condition, also composition are respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels of an antiinflammatory steroid in a subject, for reducing or depleting levels of cof, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of adenosine composition or inflammation, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nyce JW,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś
CC comprising oligonucleotides, effective for alleviating
CC comprising oligonucleotides, effective for alleviating
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC omposition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                       The present invention describes a method for concentrating a gene in a trace amount from a DNA sample containing the gene by separating it from a gene in a large quantity comprises dividing the sample into driver and target DNA fractions, mixing and forming single-stranded DNAs from them, hybridisation to produce a double-stranded DNA, and repeating the steps. The method can be used for concentrating a trace amount of an expressed gene even from large amounts of a (un)known gene, which is useful in screening industrial enzymes, pharmaceutical and agrochemical leads from nature e.g. soil, river and lake water, as well as antibiotics, and identifying parasitic and infectious microorganisms for disease diagnosis. The present sequence represents a PCR primer which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         hypertension, emphysema, chronic obstructive pulmonary disease, pulmonar transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Method for concentrating trace genes expressed even in presence of l amounts of (un)known genes, useful in screening industrial enzymes, pharmaceutical and agrochemical leads from nature.

                                                                                                                                              primers AAQ86362-83 and AAQ87677-82 were used to detect the expression of various cytokines genes in HIV infected B-cell, T-cell deficient (BCTD) mice which have been transformed with human thymus, liver tissue and bone marrow implants (BCTD-huBM mice). These mice are immune-deficient for murine B- and T-cells but can express human immunity cells such as T-cells and monocytes in their peripheral lymphoid compartments. These mice are useful as models for the pathogenesis of human disease, e.g. for assaying the dissemination of HIV. The primers are used to assay the effect of HIV on cytokine gene expression e.g. as a model for human patients with HIV. The primers AAQ86376-7 are used to detect the expression of the interleukin-5 gene, using cDNA derived from mRNA extracted from the long bones of BCTD-HuBM mice. The invention relates to an isolated nucleic acid molecule comprising a CC length of about 100 nucleotides of less, which has a sequence at least CC about 70% identical to the human conserved non-coding sequence (CNS)-1 CC cluster region of chromosome 5931 containing interleukin gene CC cluster region of chromosome 5931 containing interleukin (LI) 4, IL5 and CC IL 13). Optionally, the nucleic acid has 70% identity to a human CNS-2 to CC CNS-16 or mouse CNS-1 to CNS-16 or their complements. Also included are: (C1) an expression cassette comprising a CNS-1 sequence operably linked to CC a promoter which controls transcription of a heterologous coding sequence (I) an expression cassette comprising an CC IL-13 gene and a CNS-1 sequence; (3) an expression cassette comprising an IL-4 gene, an IL-13 gene and a CNS-1 sequence flanked between two crecombination site sequences; (4) an expression cassette comprising an IL comprising one of the expression cassettes or the T-cell; and (7) CC animal comprising one of the expression cassettes or the T-cell; and (7) CC animal comprising one of the expression cassettes or the T-cell; and (7) CC animal comprising of a transcription factor to a CNS-1 sequence which compound where a CNS-1 sequence is deleted from its convolves contacting the compound with the T cell and determining the CC directions of the matibody against the transcription factor, or a small compound. The nucleic acid is useful for modulating expression cassettes with and without CNS sequence, an antibody against the transcription factor, or a small compound. The useful acid is useful for modulating expression cassette is cuseful for identifying compounds that modulate functions of CNS sequence (C1) are useful for making two lines of non-human transgenic animals that care identical except one line has the CNS-1 sequence and the other line compounds the cNS-1 sequence. The transgenic animals are useful as in vivo compounds the cappend to monitor the effects of CNS-1 are transcriptioner. The present sequence is a c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated nucleic acids which are locus control region elements interleukin gene cluster region of chromosome, referred as conserved coding sequences, useful for modulating expression of cytokine genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CNS; conserved non-coding region; 88; cytokine; interleukin 4; IL-4; interleukin 5; IL-5; interleukin 13; IL-13; chromosome 5q31; LCR; locus control region; interleukin gene cluster; transcription factor; transgenic; PCR; primer; RT-PCR; reverse transcriptase PCR; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 4;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cluster from chromosome 5q31 with and without CNS-1
                                                                                                                                                                                                                                       The present invention provides the protein and coding sequences of the canine interleukin-5 (IL-5) protein. This can be used to treat allergies, cancer and inflammatory reactions in dogs. The present sequence is a PCR primer used to obtain the sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                            Guo H,
                                                                                                                                                                                                                                                                                                                    Novel canine interleukin 5 polynucleotide and polypeptides are used generating antibodies which are useful in treating allergies in dogs

```
CC acids (NAs) comprising contacting a NA sample from a physiological cource, with a pool of 50 distinct gene specific primers under suitable conditions to enzymatically generate sub-population of NAs, where each CC gene specific primer has a sequence complementary to a distinct mRNA, and CC each labeled NA is generated using a single gene specific primer. The CC method is useful for producing a sub-population of labeled NAs which is CC useful for analysing the differences in the RNA profiles between several CC different physiological sources, where the method comprises producing CC subpopulation of labeled NAs for the different physiological sources, CC comprising the populations for each physiological sources, CC comprising the population, where the comparison is preferably CC performed by hybridising the labeled NAs for each of the distinct CC surface of a substrate to produce a hybridisation pattern for each of the sources, and comparing the patterns for each of the sources, where CC surface of a substrate to produce a hybridisation pattern for each of the sources, and comparing the patterns for each of the sources, where CC differential gene expression assays are utilised in differential correspondent tissue or subtissue types. The present sequence is a CC thuman gene specific pCR primer used in the method of the printed CC specification, but was obtained in electronic format directly from USPTO at high the pattern correspondent alternation. Note: Specific atton, but was obtained in electronic format directly from USPTO at high the population of correspondent suggestion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Producing sub-population of labeled nucleic acids, useful for analyzing differences in RNA profiles between several different physiological sources, using set of distinct gene specific primers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Primer; ss; DNA microarray; differential expression analysis; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              05-MAR-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a genetically modified human microglia cell maintained stably in vitro which has (1) has demonstrable phagocytic properties; (ii) produces progeny continuously in culture; (iii) presents CDIIb and CD68 as surface antigens; and (iv) contains human genomic DNA that has been genetically modified to include a viral vector carrying at least one DNA segment encoding an exogenous gene for intracellular expression. The microglia cell line is useful for screening compounds for the treatment of autoimmune disease, and is used in the treatment of a neurodegenerative disorder e.g. Alzheimer's disease, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, stroke, spinal cord injuries, atexia, brain trauma, multiple sclerosis and AlDS-(acquired induced by the procession of the crossis of the crossis section of the content of the cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Genetically modified human microglia cell for treating neurodegenerative disease, comprises demonstrable phagocytic properties, produces progeny in culture, presents surface antigens, and contains modified human

The method can be used for concentrating a trace amount of an expressed gene even from large amounts of a (un)known gene, which is useful in screening industrial enzymes, pharmaceutical and agrochemical leads from nature e.g. soil, river and lake water, as well as antibiotice, and identifying parasitic and infectious microorganisms for disease diagnosis. The present sequence represents a PCR primer which is used in

The present invention relates to a method of quantifying in vivo RNA from CC a biological sample. This involves collecting the biological sample in a cumpound inhibiting RNA degradation and/or gene CC induction, forming a precipitate comprising nucleic acids, separating the precipitate from the supernatant, dissolving the precipitate using a CC buffer, forming a supernatant, dissolving the precipitate using a CC using an automated device, dispersing or distributing a reagent mix for construction (RT)-PCR using an automated device acids isolated within the dispersed reagent mix CC using an automated device acids isolated within the dispersed reagent mix CC using an automated device and determining the in vivo levels of transcripts using the nucleic acid solated within the dispersed reagent mix CC detecting changes in in vivo nucleic acids levels in a biological agent cC detecting changes in in vivo nucleic acids levels in a biological agent cC present, such as eukaryotic or prokaryotic cells, viruses or phages in a biological sample or for producing a medicament for treating immune CC related disease, e.g., autoimmunity, rheumatoid arthritis, multiple CC rejection or Graft versus Host Disease. The present sequence is a PCR primer/probe used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       medicament for treating immune rel
levels of transcripts using nuclei

Example 3; SEQ ID NO 55; 11pp; English.

The invention relates to producing a sub-population of labeled nucleic

cc source, with a pool of 50 distinct gene specific primers under suitable conditions to enzymatically generate sub-population of NAs, where each CC gene specific primer has a sequence complementary to a distinct mRNA, and CC each labeled NA is generated using a single gene specific primer. The CC useful for producing a sub-population of labeled NAs which is CC useful for analysing the differences in the RNA profiles between several CC different physiological sources, where the method comprises producing CC subpopulation of labeled NAs for the different physiological sources, CC comprising the populations for each physiological sources, CC differences in the population, where the comparison is preferably CC performed by hybridising the labeled NAs for each of the distinct CC surface of a substrate to produce a hybridistion is preferably associated with the Sources, and comparing the patterns for each of the sources, where CC differential gene expression assays are utilised in differential contains of diseased a normal tissue e.g. neoplastic a normal tissue, or different tissue or subtissue types. The present sequence is a human gene specific PCR primer used in the method of the invention. Note: The sequence data for this patent did not form part of the printed CC station, but was obtained in electronic format directly from USPTO or at http.wipo.seqdata.uspto.gov/sequence.html?DocID=635283981 acids (NAs) comprising contacting a NA sample from a physiological source, with a pool of 50 distinct gene specific primers under sui

Nucleic acids encoding immunoregulatory proteins from cats or useful for treating or preventing e.g. tumors or autoimmune di

Example 5A; Page 106; 264pp; English

1

The invention relates to canine interleukin-4 (IL-4), canine or feline CP Plt-3 ligand, canine or feline CD40, canine or feline CD154 (CD40) CC ligand), canine IL-5, canine IL-13, feline interferon-alpha (IPN-alpha) CC and feline granulocyte macrophage colony-stimulating factor (GMCSF), and colony-stimulating factor (GMCSF), and their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune CC used as vaccines for therapeutic or prophylactic regulation of an immune CC allergies, tumours, inflammation and graft rejection, and to increase the CC response from a co-administered antigen. The nucleotide sequences can claso be used for the recombinant production of a protein, while case sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug casesent pcR primers used in isolation, amplification and cloning of cDNAs encoding the immunoregulatory proteins of the invention.

Treatment of airway diseases such as asthma - by topically applying adenosine-free antisense oligo:nucleotide to airway epithelium of subject.

5; Page 31; 71pp; English.

A method for treating airway disease in a subject has been produced, which involves the topical administration of an essentially adenosine free antisense oligonucleotide (ON) to the airway epithelium of the subject. The present sequence is an antisense oligonucleotide HUMILSASS specific for the human ILS. The method can be used to treat airway

The specification describes antisense oligonucleotides (AAX52869-X55271) directed against at least 2 mRNAs selected from target genes, coding and non-coding regions of RNAs corresponding to target genes, gene initiation codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-end and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one or more diseases, conditions or mixtures. The antisense oligonucleotides may be derived from sequences AAX5512-74. These multiple target oligonucleotides (specifically AAX55180-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, including lung diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       acute asthma; allergy; asthma; impeded respiration; respiratory distress syndrome; pain; cystic fibrosis; pulmonary hypertension; pulmonary vasoconstriction; emphysema; chronic obstructive pulmonary disease; leukemia; lymphoma; carcinoma; colon cancer; brast cancer; lung cancer; pancreatic cancer; hepaticcellular carcinoma; kidney cancer; melanoma; hepatic metastasis;

The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. Stop ID NO:11 to 1680 (AAA32323 to AAA33992) are specifically claimed ONS from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAF19586 standard; DNA; 25 BP.

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base

Low adenosine (A) content antisense oligonucleotides which adenosine receptors during metabolism, useful e.g. for trea and respiratory obstructions.

hich do no treating

not trigger ng cancers

Claim 14; Page 208; 1592pp; English.

```
(I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with CC lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adenosine receptors, bradykinin receptors, cytokines and crevous system (CNS) and peripheral nervous and non-nervous system creeptors, chefinesian, growth factors, vasoactive peptides and creceptors, binding proteins and malignancy associated proteins. The antisense oligonuclectides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or lung inflammation, allergy(ies) and/or and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or and/or bransplantation respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CP), allergies (AR), pulmonary bypertension, emphysema, chronic obstructive pulmonary disease (COPD), hypertension, emphysema, chronic obstructive pulmonary disease (COPD), pulmonary transplantation rejection, pulmonary transplantation of the reasonate and antisense oligonucleotides used in the exemplification of the reasonate and antisense oligonucleotides used in the exemplification of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a genetically modified human microglia cell CC maintained stably in vitro which has (i) has demonstrable phagocytic CC properties; (ii) produces progeny continuously in culture; (iii) presents CC CD11b and CD68 as surface antigens; and (iv) contains human genomic DNA CC that has been genetically modified to include a viral vector carrying at CC least one DNA segment encoding an exogenous gene for intracellular CC expression. The microglia cell line is useful for screening compounds for the treatment of autoimmune disease, and is used in the treatment of a cc neurodegenerative disorder e.g. Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, stroke, spinal cord injuries, ataxia, brain trauma, multiple sclerosis and AIDS-(acquired cc isolating neurotoxic or neurotrophic molecules naturally produced by human microglia. The present sequence is an RT-PCR (reverse transcriptase CC PCR) primer which amplifies a segment of the mRNA for an expressed marker cc gene, used to characterise the cell line
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchedilation, increasing levels of ubiquinone or lung surfactant in a subject's tissue, or treating bronchoconstriction, lung inflammation, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC compositing oligonucleotides, effective for alleviating composition (a) a first active agent, compositing adenosine controlled and inflammation, allergies and creducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, composition or hyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating controlled arget polypeptide associated with lung airway or lung composition or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises (a) a delivery construction or cancer and can be anti-sense to the corresponding mRNA. CC Instruction for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, an algesic, hypotensive, immunosuppressive and cytostatic activity, is a composition comprises oligo and is administered to reduce the production of the invention for a composition is useful for preventing or cc treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The cc pulmonary obstruction, and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction are associated conflammation, allergies, asthma, impeded respiration, respiratory changelantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the milling breakdown of the milling breakdown of the milling breakdown of the conjunction and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

The primers AAT75354-T75378 were used to for cDNA synthesis in the method of the invention. Disclosed in the invention is human RAD50 (hRAD50) which is involved in DNA repair and has tumour suppression activity, and can be used to detect predisposition to, decrease the risk of or treat cancers, e.g. acute myeloid leukaemia, myelodysplastic syndrome, therapy related myelodysplastic syndrome, therapy related acute myeloid leukaemia, refractory anaemia or refractory anaemia with excess blasts. Also disclosed in this invention are human Septin-2 homologues which may be used as targets for cancer therapies and central nervous system directed treatment methods, and to measure the proliferative potential of selected cell types
                                                                                                                                                                                                                                                                                                                                                            Human tumour suppressor gene RAD50 - useful to detect predisposition decrease risk of and treat cancer, also Septin-2 homologues.
                                                                                                                                                                                                                                                                                                                Example 1;

l; cytokine;
```

PCR primers AAV59945-46 were used to identify cDNA encoding human cytokine interleukin (IL) from different cDNA pools, to provide an estimate of the degree to which the cytokine transcript is present was isolated from activated T-cells, and converted to cDNA prior to

mRNA

Novel RAD50

human immunomodulatory poly:peptide(s) - or Drosophila Septin-2 proteins.

                    The sequences given in AAT50760-69 are primers which were used to amplify the sequences encoding owine interleukin-5 (IL-5), and interleukin-12 (IL-12)-35, kD subunit (partial and full length sequence) and the 40 kD subunit. Owine IL-5 or IL-12 are used to treat and/or prevent infections in livestock (esp. cows and sheep), particularly where the animals are stressed, e.g. during transport. IL-5 and IL-12 can also be used as adjuvants in vaccines for veterinary use (partic. weakly immunogenic subunit or synthetic peptide vaccines). They may also be used to treat cancer, immunosuppression and allergy, to enhance/suppress the reproductive system and to promote growth or early maturity. Optionally interleukin can be delivered from constructs or delivery cells and antibodies are useful in enzyme immunoassays for rapid diagnosis of infection. The interleukins are immunopotentiators, especially IL-5 promotes growth of early haematopoietic progenitor cells and generation of from the calls from the constructs or delivered and constructs and constructs are described to the calls from the constructs or cells and generation of a constructs or cells and generation and constructs are constructed and construction and construc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               analogues of the yeast RAD50, the Drosophila Septin-2 and Acyl-CoA synthetase. The proteins have immunomodulatory activity. The nucleic acids and proteins can be used to identify activated T-cells in a sample population. They can also be used to isolate and identify sequences encoding other proteins or other compounds having immunomodulatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       03-JAN-1997

This invention relates to a novel method for comparing one or more nucleic acid targets within two or more samples. The method comprises preparing a sample mixture by obtaining at least a first sample and a second sample, each potentially with at least a first nucleic acid target and mixing the first nucleic acid sample and the second nucleic acid sample to create a sample mixture. The method of the invention is useful for fractionating nucleic acid samples into target fractions then using

                     This artificial sequence is an oligomer containing the palindromic sequence from human interleukin 5 (hIL-5) promoter. These oligomers can be used as inhibitors of transcription of cytokines. They can be used in the therapy of a disease associated with excessive production in vivo of a cytokine, the gene for which corresponds to the palindrome-containing sequence in (I) in its 5'-non-coding region, or which can be alleviated by reducing the production in vivo of the cytokine (claimed). In particular, the cytokine may be interleukin-5 (II-5) and the associated disease is asthma or the cytokine may be tumour necrosis factor- alpha and the associated disease is rheumatoid arthritis (claimed). They can also be used for treating e.g. allergy, chronic obstructive airways disease, inflammation, autoimmune diseases, cancer, angina, fibrossis, wound scarring, septic shock syndrome or excessive cellular proliferation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Artificial from hIL-5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   nucleic acids amplification to quantitatively assess target within each fraction. This method as compared facilitates the analysis of more target sequences to acid profiles of limited tissue samples. The present a PCR primer used in the method of the invention

                                                                                                                                                                                            This is an IL-5 mRNA target sequence (nucleotide no. 33) of an enzymati RNA molecule (ribozyme) which cleaves mRNA associated with the development or maintenance of a psoriatic or asthmatic condition. The concm. of the ribozyme necessary to effect a therapeutic treatment is lower than that of an antisense oligonucleotide and the specificity of action is higher. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                             This is an IL-5 mRNA target sequence (nucleotide no. 158) of an enzymat RNA molecule (ribozyme) which cleaves mRNA associated with the development or maintenance of a psoriatic or asthmatic condition. The concn. of the ribozyme necessary to effect a therapeutic treatment is lower than that of an antisense oligonucleotide and the specificity of action is higher. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                             Enzymatic RNA molecules which cleave mRNA - used to treat or inflammatory, arthritic, stenotic or cardiovascular diseases

PREI inhibits the activity of the hII-5 promoter and therefore II-5 expression. PREI can be used to modulate II-5 activity by acting on the corresponding region of the hII-5 promoter, especially in cases of asthma and eosinophilia or in immunocompromised subjects. PREI specifically inhibits transcription from the II-5 promoter, as no such
                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                              Example

                                                                                                                                                                                                                                                                                                                                                                                                                                    have recently emigrated from the thymus and have a predominantly composition of the compate antigens for the first time. These primers can be used in the method of the invention. The method of the invention is for evaluating the efficacy of a drug to stimulate the production of naive T-cells. The method comprises obtaining a sample containing peripheral blood monnuclear cells from a subject. A suitable dose of a drug is then administered before a second sample is obtained. The T-cell populations are then isolated from the samples. The number of naive T-cell surface population is then determined by reactive with naive T-cell surface proteins. If the number of naive T-cell surface proteins. If the number of finive T-cell sidentified as being effective. The method can be used to identify naive T-cell count elevating drugs, particularly in immuno-compromised subjects, e.g. HIV positive subjects, cancer patients or individuals with viral infection or autoimmune disease

The present sequence is an antisense oligonucleotide HUMIL5AS6 specific for the human IL5. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary disease, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON, its liberation upon antisense degradation is prevented, thereby recenting adenosine-induced bronchoconstriction in patients with hyperreactive airways
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Treatment of airway diseases such as asthma - adenosine-free antisense oligo:nucleotide to a subject.

The antisense oligonucleotides may be derived from sequences AAX55272-74. These multiple target oligonucleotides (specifically AAX55280-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, including lung diseases pulmonary vasoconstriction, inflammation, allergic rhinitis, acute asthma, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension,
                                                                                                                                                                                                                                                                                                                                                                                                        Human; adenosine receptor; low adenosine antisense oligonucleotide; phosphorothioate; impaired respiration; inflammation; allergy; allergic disease; bronchoconstriction; inhibitor; antiinflammatory; antiallergic; antisthmatic; cytostatic; analgesic; impaired airway; lung disease; ischaemic condition; pulmonary vasoconstriction; asthma; respiratory distress syndrome; pain; cystic fibrosis; emphysema; pulmonary hypertension; chronic obstructive pulmonary disease; COPD;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukemias, lymphomas, carcinomas e. colon cancer, breast cancer, lung cancer, pancreatic cancer, colon cancer, breast cancer, lung cancer, melanoma, hepatic metastases, hepatocellular carcinoma, kidney cancer, melanoma, hepatic metastases, well as all types of cancers which may metastasize or have metastasized well as all types of cancers which may metastasize or have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONS reduces side effects. The A-containing ONS breast down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present the nucleotide sequences given in the sequence listing from the present the instruction, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:1 to 1680 (AAA33233 to AAA3392) are specifically claimed ONS from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a new composition comprising an antisense oligonuclectide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired altways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstruction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           immunosuppressive, antiasthmatic, hypotensive and cytostatic activities.
The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and cativating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, combitters, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders and/or bronchoconstriction and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or

                                                                                 This invention describes a novel method for the detection of products of a nucleic acid (NA) amplification reaction (AR) using at least 2 primers where one of the primers (I) contains a 5'-homo-tail sequence, a probe binding sequence designated a primer-integrated reporter sequence (PIRS) and a sequence specific for the NA to be amplified, and a labeled probe (III). The method is used for the diagnosis of diseases, especially leukemia, meningitis, encephalitis or cytokine response. The need for expensive probe oligonucleotide additives is avoided
                                                                                                                                                                                                                                            Detecting products of nucleic acid amplification, useful for diagnosis of e.g. leukemia, comprising two primers, one containing a primer-integrated reporter sequence, and labeled probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Unidentified.

Miller S,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel method for the detection of products of a nucleic acid (NA) amplification reaction (AR) using at least 2 primers, where one of the primers (I) contains a 5'-homo-tail sequence, a probe binding sequence designated a primer-integrated reporter sequence (PIRS) and a sequence specific for the NA to be amplified, and a labeled probe (III). The method is used for the diagnosis of diseases, especially leukemia, meningitis, encephalitis or cytokine response. The need for expensive probe oligonucleotide additives is avoided
                                                                                                                                                                                                                                                                                                                                      Human; antisense; lung dysfunction; nasal airway dysfunction; antiinflammatory steroid; ubiquinone; antiinflammatory; antiallergic; antiasthmatic; hypotensive; immunosuppressive; cytostatic; gene therapy; antisense gene therapy; respiratory; lung; adenosine sensitivity; adenosine receptor; bronchodilation; bronchoconstriction; lung allergy;

CC S' and 3' intron-exon junctions, or regions within 2-10 nucleotides of CC junctions of genes encoding a polypeptide associated with lung and/or CC nasal airway dysfunction and a second active agent comprising an CC antiinflammatory steroid and ubiquinone. A composition of the invention CC immunosuppressive, antiallargic, antiasthmatic, hypotensive, CC immunosuppressive, and cytostatic activity. The composition may have a CC use in antisense gene therapy. The composition is useful for treating or CC preventing a respiratory, lung or malignant disease or condition, also CC for enhancing the prophylactic or therapeutic respiratory effect of an CC antiinflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine CC receptor, producing bronchodilation, increasing levels of biquinone or CC lung surfactant in a subject's tissue, or treating bronchoconstriction, CC Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO CC at ftp.wipo.int/pub/published_pct_sequences

CC The invention also describes a kit, that comprises: (a) a delivery composition also describes a kit, that comprises: (a) a delivery composition as antiallergic, antiinflammatory, antiasthmatic, comprises: (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition comprises: (c) analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, respiratory composition, allergies, asthma, impeded respiration, respiratory composition, allergies, asthma, impeded respiration, respiratory composition, allergies, action, bulmonary transplantation respection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the oligonacleotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonacleotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonacleotides into products that free adenosine into the system content of the anti-sense oligonacleotides into products that free adenosine into the system content of the content of the system content of the content of the system content of the content of the content of the system content of the content of the system content of the content of the content of the system content of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Primers AAQ86362-83 and AAQ87677-82 were used to detect the expressivarious cytokines genes in HIV infected B-cell, T-cell deficient (BCT mice which have been transformed with human thymus, liver tissue and marrow implants (BCTD-huBM mice). These mice are immune-deficient for murine B- and T-cells but can express human immunity cells such as T-cells and monocytes in their peripheral lymphoid compartments. These are useful as models for the pathogenesis of human disease, e.g. for assaying the dissemination of HIV. The primers are used to assay the effect of HIV on cytokine gene expression e.g. as a model for human patients with HIV. The primers AAQ86376-7 are used to detect the expression of the interleukin-5 gene, using cDNA derived from mRNA extracted from the long bones of BCTD-HuBM mice. AAT39005. To confirm the identity of amplified cDNA, digoxigenin-labelled probes specific for each cytokine (see AAT39006-T39021) were hybridised with Southern blots of amplified sequences. The expression profile for regressing and non-regressing warts was established and compared to cytokine expression patterns in normal cervical tissue. Results showed that interleukin 12 is barely expressed (if at all) in non-regressing warts, but is expressed in regressing warts. This suggests a central role for II-12 in wart regression. It has been found that II-12 can be used (especially as a vaccine adjuvant) for treating papilloma virus-associated lesions such as condyloma acuminata (anogenital warts) caused by human papilloma virus associated with HPV16 and HPV18 and HPV18 infection e.g. anogenital, cutaneous,
The present sequence is the human interleukin-5 (hIL-5) promoter wild type palindromic regulatory element (will), which inhibits the activity of the hIL-5 promoter and therefore IL-5 expression. wtPREI can be used to modulate IL-5 activity by acting on the corresponding region of the hIL-5 promoter, especially in cases of asthma and eosinophilia or in immunocompromised subjects. wtPREI specifically inhibits transcription from the IL-5 promoter, as no such sequence is present in genes encoding
                                                                                                                                                                                                                                                                                                                                       Nucleic acid sequence that inhibits activity of the interleukin-5 promoter - and proteins that interact with this sequence to modulate IL-5 gene expression, for treating asthma, eosinophilia or immune-compromised
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; inter

                                                                                                                                               A method for treating airway disease in a subject has been produced, which involves the topical administration of an essentially adenosine free antisense oligonucleotide (ON) to the airway epithelium of the subject. The present sequence is an antisense oligonucleotide HUMIL5AS2 specific for the human IL5. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary disease, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The primers AAT75354-T75378 were used to for cDNA synthesis in the method of the invention. Disclosed in the invention is human RAD50 (hRAD50) which is involved in DNA repair and has tumour suppression activity, and can be used to detect predisposition to, decrease the risk of or treat cancers, e.g. acute mysloid leukaemia, myslodysplastic syndrome, therapy related myslodysplastic syndrome, therapy related acute mysloid leukaemia, refractory anaemia or refractory anaemia with excess blasts. Also disclosed in this invention are human Septin-2 homologues which may be used as targets for cancer therapies and central nervous system directed treatment methods, and to measure the proliferative potential of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ss; human; RAD50; DNA repair; tumour suppression; cancer; Septin-2;
central nervous system; PCR; primer; amplification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human tumour suppressor gene RAD50 - useful to detect predisposition decrease risk of and treat cancer, also Septin-2 homologues.

                                                                                                                                                                      amplification. The specification describes sequences encoding human analogues of the yeast RADSO, the Drosophila Septin-2 and Acyl-CoA synthetase. The proteins have immunomodulatory activity. The nucleic acids and proteins can be used to identify activated T-cells in a sample population. They can also be used to isolate and identify sequences encoding other proteins or other compounds having immunomodulatory
                                                                                                                                                                                                                                                                  PCR primers AAV59945-46 were used to identify cDNA encoding human cytokine interleukin (IL) from different cDNA pools, to provide an estimate of the degree to which the cytokine transcript is present. was isolated from activated T-cells, and converted to cDNA prior to

CC directed against at least 2 mRNAs selected from target genes, coding and co-coding regions of RNAs corresponding to target genes, coding and codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-end and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one or more diseases. CC conditions or mixtures. The antisense oligonucleotides may be derived from sequences AAX55272-74. These multiple target oligonucleotides (specifically AAX55180-271) can be used for the antisense treatment of diseases, pulmonary vasoconstriction, inflammation, including lung cc diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis, cut asthma, allergies, asthma, impeded respiration, respiratory diseases (COPD), and cancers such as leukemias, lymphomas, carcinomas e.g. colon cancer, breast cancer, lung cancer, pancreatic cancer, carcinomas e.g. colon cancer, breast cancer, lung cancer, pancreatic cancer, as well as all types of cancers which may metastasize or have metastasized to the lungs, including breast and programs.

CC inclair acids involved in bronchoconstriction, allergies, and/or contributions in the treatment of diseases associated with inflammation, cytostatic and analgesic activities. The compositions are cuseful for the treatment of diseases associated with inflammation, compositions are cifects afflict the lungs of a subject. They can be used for treating ce.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthmat, cimpeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive carcinomas, and cancers which may metastasise to the lungs, including carcinomas, and cancers which may metastasise to the lungs, including crelease of deoxyadenosine which activates adenosine content of the constantion, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ cancer specifically claimed one from the previously named sequences.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC (1) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. CC The antisense oligonucleotides and (1) can be used to down-regulate the CC expression and or activity of target polypeptides associated with CC lung/respiratory disorders and malignancies, such as stimulating and CC chemokines, endogenously produced specific and non-specific enzymes, CC binding proteins, adhesion molecules and their receptors, cytokines and CC chemokine receptors, adenosine receptors, bradykinin receptors, central craceptors, CNS and peripheral nervous and non-nervous system CC receptors, defensins, growth factors, varied proteins and cc receptors, binding proteins and malignancy associated proteins. The CC antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or CC condition selected from pulmonary vascocinstriction, inflammation, callergies, asthma, impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary cancer. AAF18434 to AAF21543 represent human polynucleotide fragments and antisense oligonucleotides used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                           밁

CC targets in the original sample. The method comprises: a) obtaining at CC least a first nucleic acid target; (b) preparing at least a first nucleic acid target; (c) preparing at least a first nucleic acid target (d) preparing at least a first nucleic acid target (c) mucleic acid sample by appending at least a first nucleic acid target (c) mucleic acid target of the first sample); (c) preparing at least a second target nucleic acid sample (if the first nucleic acid target is present (c) sample by appending at least a second target in present (c) second sample; (d) mixing the first nucleic acid target of the second sample; (d) mixing the first nucleic acid sample and the second (c) sample; (d) mixing the first nucleic acid sample and the second (c) target nucleic acid sample mixture; (f) processing the sample mixture; (e) adding a tleast a first target specific primer to the comparising concentration of at least a first target specific primer to the comparising the sample mixture; (e) acids complementary to the first nucleic acid target is present in the first sample, and a limited concentration of second sample, and a limited concentration of second sample, and a limited concentration of second sample, if the first nucleic acid target is present (c) sample mixture; (e) adding a complementary to the first nucleic acid target of the first sample, if the first nucleic acid target is present (c) second sample, and a limited concentration of second product (c) in the first sample, and a limited concentration of second product (c) acids comprise the first nucleic acid target to the sample the first nucleic acid target of the first nucleic acid target of the first nucleic acid target to the first nucleic acid target to the first nucleic acid target to the first nucleic acid target of the first nucleic acid target of the first nucleic acid target in the second sample, if any, to the amount of the first nucleic acid target in the sample, if any, to the method is useful for comparing one or more sample; (c) amounts of m
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Comparing one or more nucleic acid targets within two or more samples useful for the competitive analysis of nucleic acid samples regardless their abundance, by competitive population (containing the target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         08-AUG-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            molecules that can be used to compare the abundance of each of the targets in the original samples. The method comprises: (a) obtaining

                                                                                                                                                                                                                                                      This invention relates to a novel method for comparing one or more nucleic acid targets within two or more samples. The method comprises preparing a sample mixture by obtaining at least a first sample and a second sample, each potentially with at least a first nucleic acid target and mixing the first nucleic acid sample and the second nucleic acid sample to create a sample mixture. The method of the invention is useful for fractionating nucleic acid samples into target fractions then using nucleic acids amplification to quantitatively assess the nucleic acid target within each fraction. This method as compared to prior art methods facilitates the analysis of more target sequences to determine nucleic acid profiles of limited tissue samples. The present sequence represents a PCR primer used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           hybridizing the samp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Comparing one or more nucleic acid targets within two or more sam hybridizing the samples into target fractions then amplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PCR; primer;
